

What is claimed is:

1. A tubular strip for leisure chair, comprising a hollow
tubular body made of a specific pliable PVC material
5 by way of injection molding and having a reduced wall
thickness as compared to general tubular strips, and
a plurality of axially extended reinforcing ribs
integrally molded on an outer surface of said tubular
body.

10

2. The tubular strip for leisure chair as claimed in
claim 1, wherein said reinforcing ribs are
circumferentially equally spaced on said outer
surface of said tubular body.
